

CAPACITOR: INFOGRAPHIC ABOUT ELECTRICAL CAPACITANCE

WHAT IS A CAPACITOR?

A passive electronic component that stores electrical charge and energy.

CONSTRUCTION (STRUCTURE):

CAPACITANCE FORMULA:

Examples:
Farad (F),
microfarad (μF),
nanofarad (nF)

$$C = \frac{Q}{V}$$

C = Capacitance (F)

Q = Charge (C)

V = Voltage (V)

HOW DOES IT WORK?

(DETAILED OPERATING PRINCIPLE)

APPLICATIONS

Energy Storage
(e.g. flashes)

Smoothing/Filtering
Smoothing/Filtering
(e.g. adapters)

Frequency Selection
(for radio-frequency circuits)

Motor Starting
(provides voltage pulse)

Key Component in Modern Electronics
